

# DS 5

The DS 5 is a lightweight, portable pressure spray device that sprays cleaning or disinfection agents, and is suitable, among other things, for the decontamination of personnel in protective suits.

With its integrated air pump, the DS 5 generates a operating pressure of up to 3 bar and sprays precise quantities of liquids such as decontamination and cleaning agents through a stainless steel nozzle.

The robust and break-proof plastic tank is extremely resistant to strong acids and alkaline solutions and has a capacity of 5 litres. The generous filler neck with integrated funnel enables the tank to be filled and cleaned without problem.

The tank is transparent allowing the user to read the level easily at any time. The low weight when empty guarantees not only simple handling but also mobile and flexible operation.

The device has a low empty weight of 2.3 kg and is compact due to its small dimensions (190 x 190 x 480 mm).

## Special Features

- Robust components
- Intuitive operating concept
- Minimised controls
- Can be operated wearing full protective gear
- Compact dimensions
- Quick to set up
- Integrated manual pump
- Can be used with virtually all commercially available liquid cleaning and decon agents
