

BloodCOMM PREMIUM

Overview

BloodCOMM Premium is a fully automated, remote blood monitoring software system enabling total compliance and accountability for each unit of blood. Designed for the highest level of insight and control, Premium provides a complete cold chain of custody. Whether overseeing one organization or managing across multiple locations and partners, this platform delivers a new level of visibility and confidence, enhancing efficiency and optimizing workflows. BloodCOMM Premium is the next-generation, full-service, cloud-based platform designed specifically for advanced blood management from the point of collection to transfusion.

Key Capabilities

AI & Barcode Scanning

Scan blood bags from the point of collection with AI or Barcode scanning, automatically capturing each unit of blood's information

Cold Chain of Custody

All events are logged, providing a complete cold chain of custody such as location, temp., expiration date, excursions, inspections, etc.

Automated Reporting

Automated blood reports emailed directly to blood banks, hospitals or supervisors upon transfusing or returning units of blood

GPS Tracking

GPS tracking for each enrolled device
